

Service Description Internet All in One 20 Mbit/s dedicated:

Access to the Internet is provided over a high-speed data network (gigabit network) available at Messe Wien and a high-performance, redundant connection to two different providers.

A controller-based Cisco Wi-Fi is in operation at Messe Wien, and the entire venue is comprehensively served by Cisco Wi-Fi access points of the newest generation. Due to the nature of Wi-Fi technology, however, limitations may result from booth structures or interfering signals. The Wi-Fi frequency range is license-free and is also used for other purposes (Bluetooth, radio microphones), and we can therefore make no guarantees with respect to the lack of interference.

With “Internet All in One 20 Mbit/s dedicated” you get an individual SSID and a belonging WPA2-Key. In the Package included is a Wi-Fi Access-Point and a 16-port switch for connecting up to 15 PCs. There is a private IP address allocation via DHCP, fair use download volume, dedicated channels within the 5GHz band.

With additional network switches (not included in this package), up to 250 computers can be connected.

All to the Wi-Fi network and to the switch connected devices share the total bandwidth of 20 Mbit/s.

You need either a 5GHz Wi-Fi-capable device, then activate Wi-Fi on the device, select the network SSID, enter the WPA2-Key on request, start a browser, open any page (e.g. www.kapsch.net), and surf away, or a computer which you connect via network cable to the switch, at the computer start also an Internet browser (e.g. www.kapsch.net) and surf away. (In both cases in the Internet settings, DHCP should be configured and the proxy deactivated)

You can also buy this product.

Insofar products are being on offer to the Customer, Customer is authorized to buy the products. In case Customer does not retribute the products that have been handed over to him at the agreed time latest, the parties agree into a buying agreement regarding the handed over products without further statement.
